AEROSPACE MATERIALS
Aluminium alloys take off, 407

ALUMINIUM
The Luxfer Group profile, 156
Aluminium alloys take off, 407
Driving ahead with aluminium extrusions, 605
The material benefits of casting and refining using magnetic fields, 675
Al turned out nicely, 763

ANALYSIS
Sizing up the composition, 5
Is that one grain or two?, 8
Excavating alloys, 210
A local look at corrosion, 272
Spotting the rot with FTIR, 274
Making light work of materials sensors, 340
Throwing light on fibres and composites, 617
A smart look at grain boundaries, 683

AUTOMOTIVE MATERIALS
Are you sitting comfortably?, 15
Body panels take the test, 84
Driving the weight down, 281
Fuel cells on the road to success, 412
Driving ahead with aluminium extrusions, 605
Plastics gain strength by going it alone, 608
Probing the depths of thin coatings, 673
Foot on the pedal research, 690
Closing in on lightweight parts, 761

BIOMATERIALS
In kneed of testing, 746
Implanting wisdom, 758

BUILDING AND CONSTRUCTION
Materials for the Millennium Dome, 76
Steeling concrete with fibre reinforced plastics, 78

CERAMIC MATERIALS
Laying it on thick (or thin), 144
Hard and fast ceramic composites, 215
Ceramic rheology tester gets the thumbs up, 474
It's all coming together with ceramics, 534
Quick inking, 690
Creating ceramics in a flash, 743

COMPOSITE MATERIALS
On track with MMC brake disks, 17
MMCs: the future, 20
Metal Matrix Composites VI conference report, 22
Materials for the Millennium Dome, 76
Steeling concrete with fibre reinforced plastics, 78
Hard and fast ceramic composites, 215
Taking stock of composites at FRC98, 217
On-line NDE and monitoring of composites manufacturing, 337
Throwing light on fibres and composites, 617

CORROSION & DEGRADATION
A local look at corrosion, 272
Scaling the problems of protective oxides, 344

CUTTING EDGE
Proud to be materials girls, 28
From atoms to aeroplanes, 154
Welding studies proves rewarding, 226
Tried and tested, 227
Bioceramics for life, 228
Guided by nature, 356

DIAMOND MATERIALS
A drop of the hard stuff, 81
Laying down a gem of a surface, 348

EDUCATION
A week is a long time in summer school, 24
Steel's world beating formula, 224
Materials teaching under the microscope, 765

Materials World 1998 Index

Issue	Pages	Issue	Pages
January	1-64	July	393-464
February	65-136	August	465-528
March	137-200	September	529-600
April	201-264	October	601-664
May	265-328	November	665-736
June	329-392	December	737-800

ELECTRONIC MATERIALS
The chips are up for copper, 221
A smart look at grain boundaries, 683

ENVIRONMENTAL ISSUES
Not such a waste of energy, 152
A burning desire for energy efficiency, 288
Packaging pulled back into production, 397
Industry warms to energy efficient technology, 410
Fuel cells on the road to success, 412
Coming around again, 414
Saving the coppers, 545

INFORMATION TECHNOLOGY
Driving innovation with a different way of thinking, 207
Curing by computing, 269
Keeping things under control, 276
An elementary way of solving pressing problems, 620

JOINING AND BONDING
Sounding out good adhesion, 149
It's all coming together with ceramics, 534
Arc takes laser welding into new territory, 537
Getting to grips with sticky polymer surfaces, 539

MARINE MATERIALS
The materials art of fast craft, 680

METALS AND ALLOYS
Powder metallurgy drives forward, 141
Modern materials for Mokumé Gane, 213
Zinc makes it in the modern world, 219
The chips are up for copper, 221
Scaling the problems of protective oxides, 344
Nickel, nickel everywhere, 542
Saving the coppers, 545
Liquidmetal swings into action, 547
It's a gas making nickel powders, 610
Forming fine spheres in the heat of a plasma, 612
Bright days ahead for PM – PM98 preview, 625

MICROSCOPY
Is that one grain or two?, 8
Rapid routes to planar polishing, 73
Excavating alloys, 210
Taking SEMs into a new environment, 399
A leap into the third dimension, 402
Not just a pretty small picture, 615
Testing conditions for testing, 749
UFM shakes out the details at the nanoscopic scale, 753
Prize winning peeks at the microscopic world, 756

MISCELLANEOUS
Modern materials for Mokumé Gane, 213
Striving for satisfaction, 278
Heavenly body with a heart of steel, 283
Bessemer – In memory of a great inventor, 284
Off to a roaring start – the Materials Congress, 286
Royal recognition for booming businesses, 334
Shaping the future of materials science, 352
It's your future – take it, Presidential address, 415
Forging good relationships between industry and academia, 550

NONDESTRUCTIVE TESTING
Sounding out good adhesion, 149
Vision in the heat of processing, 223
On-line NDE and monitoring of composites manufacturing, 337
Watching for defectives, 553
Testing for cracks from the sea to the sky, 670
Probing the depths of thin coatings, 673

PACKAGING
Packaging pulled back into production, 397
Cheers for new steel packaging designs, 479

POLYMERS & PLASTICS
Moulding the future, 12
Are you sitting comfortably?, 15
Plasma polymers for suitable surfaces, 70
Spotting the rot with FTIR, 274
Getting to grips with sticky polymer surfaces, 539
Plastics gain strength by going it alone, 608
K98 – messe-ing about in Dusseldorf, 622

PROCESSING
Moulding the future, 12
Rapid routes to planar polishing, 73
Powder metallurgy drives forward, 141
It's a gas making nickel powders, 610
Forming fine spheres in the heat of a plasma, 612
The material benefits of casting and refining using magnetic fields, 675
Profit from processing, 767

RUBBER
Curing by computing, 269
Stretching the elastomer envelope, 485
A long stretch of rubber research, 687

SMART MATERIALS
Making light work of materials sensors, 340
A smart look at grain boundaries, 683

STEEL & STEELMAKING
Inclusion engineering, 147
Vision in the heat of processing, 223
Steel's world beating formula, 224
Driving the weight down, 281
Heavenly body with a heart of steel, 283
Bessemer – In memory of a great inventor, 284
Cheers for new steel packaging designs, 479
Steel plant development for the 21st century, 480
Hydroforming starts to make an impression, 483
Watching for defectives, 553
An elementary way of solving pressing problems, 620
The material benefits of casting and refining using magnetic fields, 675
Closing in on lightweight parts, 761

SURFACE COATINGS
Plasma polymers for suitable surfaces, 70
Laying it on thick (or thin), 144
The future's bright for surface engineering, 346
Laying down a gem of a surface, 348
Getting into the groove of surface testing, 476
Sulzer Metco profile, 549

TESTING
Body panels take the test, 84
Taking the stress out of fracture toughness, 86
Ceramic rheology tester gets the thumbs up, 474
Getting into the groove of surface testing, 476
In kneed of testing, 746
Testing conditions for testing, 749

THERMAL PROCESSING
Thermal processing in a state of flux, 470
Wolfson Centre treats itself to anniversary celebrations, 472
